

Quick Start Guide

Bactiquick is fast, reliable and easy to use in just a few simple steps

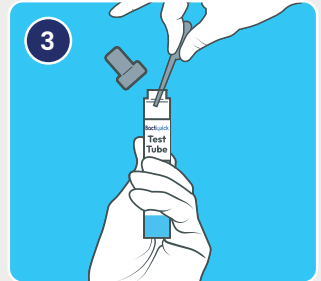

Power up the device

- Press the power button once.
- When the blue LED lights stop flashing it's ready to use.

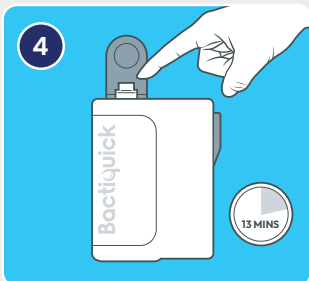

Collect & dilute the sample

- Collect your water sample in a suitable container.
- Transfer 0.2ml into a Dilution tube (blue capped) using a fresh pipette.
- Close the lid and give the dilution tube a vigorous shake.

Add the diluted sample to the Test tube

- Transfer 0.2 ml from the Dilution tube using a fresh pipette into the Test tube (grey-capped).
- Give it a gentle mix (do not invert).

Insert the tube

- Put the Test tube into your Bactiquick device and close lid. The test will start automatically.
- Wait 13 minutes for the result.

Connect to the app

- Connect to the Bactiquick app to see more detail about your test result.

Download the Bactiquick app from the App Store or Google Play

Watch the Bactiquick demo video

To ensure reliable results, it's important to read the 'Using Bactiquick' instructions below carefully and note the following:

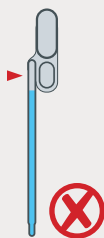

- Thorough mixing of samples is vital to ensure accurate results. **Follow the guidance on sample mixing exactly.**
- Only use the provided sterile/endotoxin-free consumables.
- Do not touch or mark the bottom half of the Test tubes.
- Do not reuse consumables.
- Discard pipettes if the tip touches a non-sterile surface and use a fresh one.

Pipetting errors

Slowly release the bulb fully to draw the liquid up into the tube. Important: Ensure the tube is completely full and don't fill the middle bulb past the inlet.

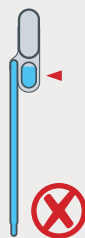

Correct volume

Under volume

Over volume

Clear, easy-to-understand results.

Results are displayed on the device using a simple traffic-light system. (Numerical values are displayed in the Bactiquick app.)

Green

Low levels of bacteria (low risk)

Orange

Moderate bacterial concentration (medium risk)

Red

High bacterial concentration (high risk)
